Product Description

Braided ropes are used as high temperature gasketing and/or packing. They are rated from 500 °F to 600 °F depending on the particular material.

Braided Rope Various materials

Braided Ropes are available in aramid (Kevlar), fiberglass, silica and ceramic materials (see material data sheets). Inconel and Stainless Steel braided ropes are also available. Ropes are available as twisted, knitted, braided, and braid over braid. Standard sizes range from 1/8" to 3". Ropes can also be coated with Vermacite and Silicone or PTFE coating.

Braided ropes are used for furnace and heater doors, peepholes, man ways, etc. They can also be used as a gasket for ducting flanges. Braided ropes are also incorporated into tube seals and other fabricated products such as tadpole gaskets.

Wicking is available in sizes ranging from 3/32" and onward.

Cord is available in sizes ranging from 3/64" to 5/16". Nextel 312 and 440 are available as cord.
