Product Description

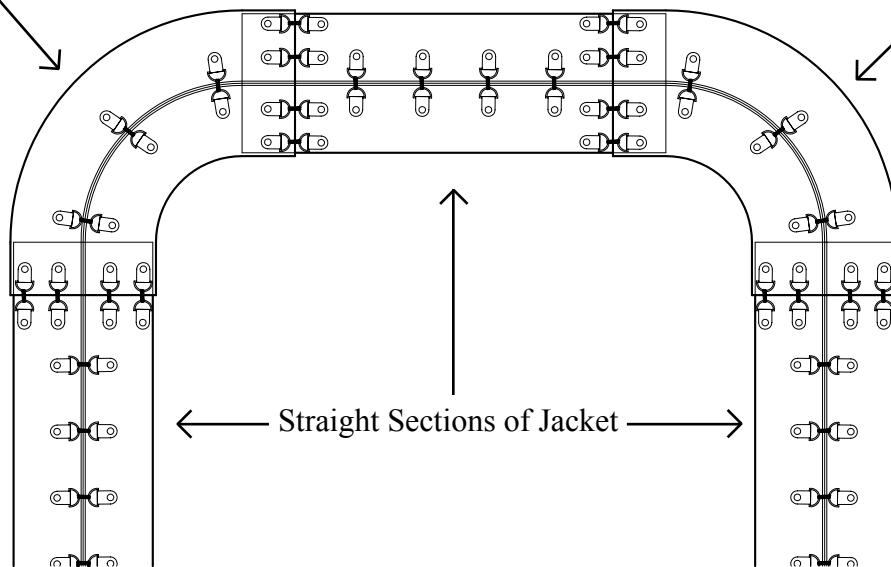

Pigtail insulation jackets are pre-fabricated Teflon coated glass sections designed to fit over the various radius and straight pipe sections of a pigtail connected to the radiant inlet or outlet headers on steam methane reformers.

Pigtail Insulation Jackets Teflon Coated Glass

Radius Section of Jacket

Radius Section of Jacket

The pigtails are first wrapped with ceramic fiber blankets. Typically, field crews will then cut and fit insulation jackets to go over the ceramic fiber. This is tedious, time consuming work.

The Flextech Pigtail Jackets save time by matching each pigtail section to a corresponding silicone jacket section that slips over the insulation and is laced together with stainless steel draw cord.

These jackets can handle temperatures up to 500 °F, and are weatherproof. They can be removed easily for pipe inspection and can be re-installed.
